

LIFE ON THE SEA FLOOR

Rays and flatfish both live on the sandy sea bed and feed on small fish and crustaceans. While you're at the aquarium, take a close look at these fish and list three similarities and three differences between rays and flatfish.

Bear in mind the following questions:-

1. Where are their eyes?
2. How do they swim?
3. Where are their mouths?
4. What shape are they?
5. How do they develop from eggs to adults?
6. How do they catch their prey?

Set out your answers in the table below.

RAYS	FLATFISH
