

# Fish to Fall in Love With!

In the vastness of the ocean, finding a mate can be challenging but for seahorse couples there are definitely not 'plenty of other fish in sea'...

Seahorses pair for life and remain faithful to each other. Every day during the mating season they meet first thing in the morning to reinforce their pair bonding with an elaborate courtship display.

The seahorse pair will change colour during their courtship displays, have a go at colouring them in and send us a photo so we can see what your seahorses look like!

## Short-snouted Seahorse (*Hippocampus hippocampus*)
